

Falcon F150 Low Lift Rear Load

Designed with strength and durability in mind, the main frame is structural steel with an epoxy based painted exterior that is resistant to most environmental and corrosive conditions. The Falcon F150 requires only a minimum amount of maintenance to keep it clean and looking new.

A bidirectional single drive unit allows for a great deal of flexibility in movement and speed. The single wheel suspension keeps the drive wheel in contact with the floor at all times. All wheels feature extra thick polyurethane tread for long life and quiet operation. Electromechanical brakes are included as an integral part of the permanent magnet motor and sealed gearbox assembly. Each Falcon F150 is equipped with a 48-volt battery power source, which is sized for more than a full shift of operation. Vehicle object detection sensors reduce vehicle speed and stop vehicle travel when an obstruction is in the travel path of the vehicle.
